

VETRX

Dosages and Preparing Solution: The directions below apply to bantams and mature poultry of similar size, unless otherwise noted. For larger or smaller birds, change the dosage in proportion to the size of the bird.

Use VETRX_xTM warm, unless otherwise specified. To warm, place the spout in an open position. Put the bottle in a small pan of [water](#). Heat at medium temperature. Always test the temperature of the product before applying internally or externally.

To prepare the solution, add one (1) teaspoonful of warm VETRX_xTM to one (1) cup of very warm water. VETRX_xTM mixes with hot water, but floats on top of cold water.

Colds and Croup: Symptoms of colds are watery eyes, droopy appearance, and an unusual tendency to shake or turn the head.

To treat colds, drip VETRX_xTM solution into the bird's nostrils. Place a few drops of warm VETRX_xTM, straight from the bottle, down the throat of the infected bird at night. Also, rub some warm VETRX_xTM from the bottle over the head of birds and under wings. If a cold develops into more severe roup, change to a stronger solution of one (1) teaspoonful of VETRX_xTM in one-half (1/2) cup of hot water. Treat the same as for colds. Also, swab the throat and wash the head and eyes with the stronger solution four (4) or five (5) times a day. Keep the nostrils, eyes, and throat as clean as possible.

Flock Care: If colds infect many in a flock, spray warm VETRX_xTM solution over as many birds as possible. Use any small sprayer, and keep the sprayer in a pan of hot water before using. For birds in a flock which look droopy, rub warm VETRX_xTM, full strength, over their heads, eyes, and under their wings. Also, provide plenty of clean, cool drinking water for the flock. Add a few drops of VETRX_xTM to the drinking water each time it is changed. It will float on the water and get on the beaks and nostrils of the birds each time they drink.

Vaporizer: If deciding to use a vaporizer, make certain that it is a hot water model. Follow the manufacturer's directions. Fill the cup with VETRX_xTM full strength and operate the vaporizer for at least one (1) hour while birds are roosting.

Preventing Colds and Roup: To help prevent colds, sprinkle a few drops of VETRX_xTM in the litter every four (4) or five (5) days. Add a few drips to the drinking water every time it is changed. Rub one (1) or two (2) drops of warm, full-strength VETRX_xTM under the wings.

For Show Birds: To protect birds from colds while traveling to and from shows, place a few drops of warm VETRX_xTM under one (1) wing. It does not stain, or harm feathers, wing, or color.

Rubbing VETRX_xTM on the legs brings out the true color and helps to protect them from mites and lice. When the birds return from shows,
